Fast Memorization Tips for Beginners

- **The 2s Trick:** Every result is simply doubling the number (Even patterns ending in 2, 4, 6, 8, 0).
- **The 5s Rhythm:** Answers always alternate ending with **5** or **0** (5, 10, 15, 20...).
- **The 9s Secret:** Look closely at the digits of the answers (18, 27, 36...). If you add the digits together (1+8 or 2+7), they always equal 9!

Advanced Pattern Strategies

- **Mastering the 11s:** Up to multiplier 9, just write the factor twice (22, 33, 44...).
- **Deconstruction Trick (For 12 to 19):** If stuck on an advanced step, break it up. For example, to find 14×6 , simply solve $(10 \times 6) + (4 \times 6)$ which equals $60 + 24 = 84$.
- **The 20s Ease:** The 20 times table is identical to your standard 2 times table, with a zero attached at the end!
